1. Power Quality, Problems and Solutions	15
1.1 Electricity Generation and Distribution	16
1.2 Power Problems	18
1.2.1 Sags	19
1.2.2 Brownouts	20
1.2.3 Surges	20
1.2.4 Spikes and Transients	20
1.2.5 Electrical Noise	21
1.2.6 Harmonics	21
1.2.7 Frequency Variations	23
1.2.8 Blackouts and Mains Power Supply Failures	23
1.3 Power Continuity Plans and Uninterruptible Power Supplies	24
1.3.1 Critical, Essential and Non-Essential Loads	24
1.3.2 Power Quality Review	25
1.3.3 UPS Selection	28
1.3.4 Battery Sets, Flywheels and Fuel Cells	29
1.3.5 Generators	30
1.3.6 Alarm Monitoring, Communication and Control	30
1.3.7 Project Management, Logistics and Installation	31
1.3.8 Warranties, Maintenance and Service	31
1.4 Other Power Solutions	31
1.4.1 Standby Back-Up Power Solutions	31
a) Central Power Supply Systems (CPSS) For Emergency Applications	31
b) Standby Power Systems (SPS)	32
c) Inverters	32
1.4.2 Mains Present Power Solutions	32
a) Power Conditioners	32
b) Automatic Voltage Stabilisers (AVS)	33
c) Filters and Filter Strips	33
d) Transient Voltage Surge Suppressors (TVSS)	34
1.5 Summary	34
<hr/>	
2. UPS Topologies and Designs	35
2.1 UPS Design	36
2.1.1 Inverters	36
2.1.2 Rectifiers	37
2.1.3 Battery Sets	38

2.1.4 EMI/RFI Filters	39
2.1.5 Bypasses	39
2.2 Static UPS Topologies	42
2.2.1 On-Line UPS - VFI (Voltage and Frequency Independent)	42
2.2.2 Line Interactive UPS - VI (Voltage Independent)	43
2.2.3 Off-Line UPS - VFD (Voltage and Frequency Dependent)	44
2.3 UPS Accessories	45
2.3.1 External Maintenance Bypasses	45
2.3.2 Parallel Kits	46
2.3.3 Battery Extension Packs	46
2.3.4 UPS and Environmental Monitoring	47
2.4 Rotary UPS	47
2.5 Summary	48

3. UPS Sizing and Selection	49
3.1 UPS Sizing	50
3.1.1 Load Types	50
3.1.2 Apparent Power - Volt-Ampere (VA)	51
3.1.3 Real Power - Watts (W)	51
3.1.4 Power Factors	52
a) Lagging Power Factor	54
b) Unity Power Factor	54
c) Leading Power Factor	55
d) Effects of Harmonics on Power Factor	56
3.1.5 Crest Factor	57
3.1.6 Static and Dynamic Stability	57
3.1.7 Battery Runtimes	58
3.1.8 System Expansion	59
3.1.9 Overloads	59
3.1.10 Power Distribution	59
a) Capital Costs	60
b) Operating and Maintenance Costs	61
c) Power Optimisation	61
d) Remote Management and Control	61
e) Access For Maintenance, Battery Testing and Replacement	61
f) Future Expansion	62
3.1.11 Resilience	62
3.1.12 Supplies - Phases, Voltages and Frequencies	62
3.2 UPS Range Selection	63
3.2.1 IT Applications 300VA to 3kVA	64
3.2.2 Network Applications 3-80kVA	64
3.2.3 Industrial and Enterprise Applications 10-800kVA	65
3.2.4 Rackmount Applications (Net-Tel) 700VA-30kVA	66
3.3 Summary	66

4. On-Line UPS Designs	67
4.1 General UPS Design	68
4.1.1 Transformer-Based UPS	68
4.1.2 Transformerless UPS	69
4.2 Rectifiers and Battery Charging	70
4.2.1 Transformer-Based UPS	70
a) Rectifier-Chargers	70
b) Phase Controlled Rectifiers	70
c) 6-Pulse Rectifiers	72
d) 12-Pulse Rectifiers	74
4.2.2 Transformerless UPS	75
a) Rectifier, Booster-Converters	75
4.3 Rectifiers and Harmonics	77
4.3.1 6-Pulse Rectifiers	77
4.3.2 12-Pulse Rectifiers	78
4.3.3 Rectifier, Booster-Converters	79
4.3.4 Mitigating Total Harmonic Distortion	80
4.3.5 Passive Harmonic Filters	81
a) 6-Pulse Rectifiers	81
b) 12-Pulse Rectifiers	81
c) Input Power Factor Correction	82
4.3.6 Active Harmonic Filters	83
a) Operating Principle	83
b) Neutral Currents	85
c) Active Harmonic Filter Characteristics and Performance Comparison	86
4.4 Inverters	87
4.4.1 Transformer-Based UPS	87
a) Inverter Design	87
b) Inverter Operation	87
c) Pulse Width Modulation (PWM)	88
d) PWM Inverter Process	89
e) Single and Three-Phase Inverter Design	90
4.4.2 Transformerless UPS	91
a) Insulated Gate Bipolar Transistors (IGBTs)	91
b) Inverter Operation	91
c) Pulse Width Modulation (PWM)	91
d) PWM Inverter Process	92
e) Single and Three-Phase Inverter Design	92
4.5 Static Switches	93
4.5.1 General Operation	93
a) UPS On Line - load connected to the inverter	94
b) UPS On Bypass - load connected to the bypass supply	94
c) UPS Output Off - load disconnected	95
4.5.2 Types of Static Switching Systems	95
a) Contactor and Short Burst Thyristor Combination	96
b) Full-Rated Thyristor and Contactor Combination	96
c) Full-Rated Thyristor System	97

4.6 Back-Feed Protection	98
4.6.1 Plug-In UPS	98
4.6.2 Hardwired UPS	98
a) Mechanical Back-Feed Device	98
b) Electronic Back-Feed Device	98
4.7 EMI/RFI Filters	99
4.8 Comparing Transformer-Based and Transformerless UPS	99
4.8.1 Upstream Supplies	99
a) Input Power Factor	99
b) Harmonics	100
4.8.2 Operating Environment	100
a) Efficiency	100
b) Noise Output	101
c) Size and Weight	101
4.8.3 Purchase and Running Costs	102
a) Purchase	102
b) Running	102
4.9 Summary	102
<hr/>	
5. UPS Reliability and Levels of Resilience	103
5.1 UPS Reliability Measures	104
5.1.1 Mean Time Between Failure (MTBF)	104
5.1.2 Mean Time to Repair (MTTR)	105
5.1.3 Availability	105
5.2 Single UPS Installation	106
5.3 Parallel UPS Configurations	106
5.3.1 Parallel-Redundant Systems (N+x)	106
5.3.2 Parallel-Capacity Systems (N)	107
5.3.3 Parallel Conversion and Closed-Loop Communications	108
5.3.4 Decentralised and Centralised Control	108
5.4 Parallel UPS Operation	109
5.4.1 Parallel-Redundant Systems	109
a) Normal Operation (supply present)	110
b) Battery Operation (supply failure)	110
c) Supply Restoration	110
d) UPS Module Fault Condition	110
e) Overload	111
f) Emergency Bypass	112
g) Dual Input Supplies	112
5.4.2 Parallel-Capacity Systems	113
5.4.3 Parallel Operation Accessories	114
a) UPS Group Synchroniser (UGS)	114
b) Parallel Systems Joiner (PSJ)	114
5.5 Parallel UPS Installation Options	116
5.5.1 Common and Separate Battery Sets	116
5.5.2 Decentralised and Centralised Static Bypass Systems	117

5.5.3 Maintenance Bypasses	118
5.5.4 Power Distribution and Redundant Power Supplies	118
5.6 Series-Redundant UPS Systems	118
5.7 Automatic Transfer Switches (ATS)	119
5.8 Sample Reliability and Availability Calculations	120
5.8.1 Single UPS Module	120
5.8.2 Synchronised UPS	120
5.8.3 Parallel-Redundant UPS	121
5.8.4 Synchronised Parallel-Redundant UPS Groups	121
5.9 Summary	122

6. Batteries and Alternative Back-Up Solutions	123
6.1 UPS Battery Sets	124
6.1.1 Nickel-Cadmium (Ni-Cad) Batteries	124
6.1.2 Lead-Acid Batteries	124
a) Open-Vented (Wet Flooded) Batteries	125
b) Valve-Regulated Lead-Acid (VRLA) Batteries - AGM and Gel	125
6.2 UPS Battery Pack Installation	127
6.2.1 Internal Battery Sets	128
6.2.2 External Battery Cabinets	129
6.2.3 Battery Stands	130
6.2.4 Rackmount Systems	131
6.3 Battery Set Sizing	132
6.4 Battery Life, Performance Optimisation and Testing	132
6.4.1 Battery Design Life	132
6.4.2 External Battery Testing	134
a) Impedance Testing	134
b) Electro-Chemical Testing	135
6.4.3 Performance Optimisation	135
a) Reduced Usage	135
b) Improved UPS Battery Management	136
c) Predictive Testing	136
6.5 Battery Monitoring	137
6.6 Storage	137
6.7 Disposal	137
6.8 Future Developments	138
6.8.1 Flywheel Energy Storage Devices	138
6.8.2 Fuel Cells	139
6.8.3 Super Capacitors	141
6.9 Summary	142

7. Generators	143
7.1 Generator Components and Configuration	144
7.1.1 Engine	144
7.1.2 Fuel Tank	145

7.1.3 Governor	146
7.1.4 Alternator and Automatic Voltage Regulator	146
7.1.5 Exhaust and Air Cooling Systems	146
7.1.6 Starter Battery and Charger	147
7.1.7 Automatic Mains Failure (AMF) Panel	147
7.1.8 Electric Heater Jacket	148
7.1.9 Acoustic Noise Hood	148
7.1.10 Weather-Proof Enclosure	149
7.2 Generator Sizing and UPS Compatibility	149
7.3 Generator Operation (single and parallel)	151
7.4 Generator Installation	153
7.4.1 Earthing	153
7.4.2 Neutral Connections	153
7.4.3 Planning Authorities, Landlords, Fire Services and Insurance	154
7.4.4 Logistics and Siting	155
7.5 Generator Testing and Maintenance	155
7.6 Future Developments	155
7.6.1 Gas Turbines	155
7.7 Summary	156

8. Alarm Monitoring and Remote Control	157
8.1 UPS Alarm Signals	158
8.1.1 Audible Alarms	159
8.1.2 Visual Alarms	159
8.1.3 Basic Remote Alarms	160
a) Opto-Isolators	160
b) Volt-Free Contacts	160
8.2 Remote Communication and Control	161
8.2.1 Remote Communication	161
a) Serial Communication	161
b) Simple Network Management Protocol (SNMP)	161
c) MODBUS/JBUS	162
d) Profibus	162
8.2.2 Remote Control	163
8.3 UPS Software Packages	163
8.3.1 UPS Installation Software	163
8.3.2 UPS Monitoring and Control Software	163
a) Architecture	165
b) Priority-Based Load Shedding and Shutdown	165
c) Planning	166
d) Testing	166
8.3.3 Remote Service Management Software	166
8.4 Remote Shutdown	167
8.4.1 Emergency Power Off (EPO)	167
8.5 Monitoring Other Hardware	167
8.5.1 Maintenance Bypass	167

8.5.2 Generator	167
8.5.3 Environmental	167
8.5.4 Battery Set	167
8.6 Summary	168

9. Projects, Logistics and Installation	169
9.1 Site Surveys	170
9.2 Logistics	170
9.3 Location and Environment	172
9.3.1 Physical Space	172
9.3.2 Floor Loading	172
9.3.3 Remote and Split Locations	173
9.3.4 Ambient Temperature	173
9.3.5 Dust and Humidity	173
9.3.6 Piping, Flooding Levels and Sprinklers	173
9.3.7 Noise Levels	174
9.3.8 Lighting Levels	174
9.3.9 Health & Safety and Environmental Standards	174
9.3.10 Permits To Work	175
9.3.11 Existing Kit and Battery - Removal and Disposal	175
9.3.12 Storage and Acclimatisation	175
9.3.13 Cable Runs, Distribution and Switchgear	175
9.3.14 Transient Protection	175
9.3.15 Electro-Magnetic Compatibility (EMC)	176
9.3.16 Containerisation	176
9.4 Electrical Installation	177
9.4.1 Harmonics	177
9.4.2 Protection and Discrimination	179
a) UPS Connection Types	181
b) Maximum Input Ratings - Rectifier and Bypass	183
9.4.3 Residual Current Device (RCD)	186
9.4.4 Cable Sizing and Installation	188
9.4.5 Downstream Protection and Discrimination	189
a) Normal Operation with a Mains Power Supply Present	189
b) Battery Operation with no Mains Power Supply Present	190
9.4.6 Galvanic Isolation Options	191
9.4.7 Maintenance Bypasses	193
9.4.8 Parallel Systems Connection	195
a) Input Supply Rating and Cable Sizing	195
b) Input Supply Isolators and Circuit-Breakers	196
c) Output Isolators	197
9.4.9 Dual Input Connection	197
a) Transformer-Based UPS	197
b) Transformerless UPS	198
9.4.10 Phase Balancing and Neutral Currents	198
9.4.11 Earthing and Bonding	198

9.4.12 UPS Output Neutral-to-Earth Connection	200
9.4.13 Battery Extension Pack Connection	201
9.4.14 Transition Boxes	202
9.4.15 Emergency Power Off (EPO)	202
9.4.16 Remote Monitoring	203
9.4.17 Generator - UPS Interfacing	204
9.5 Electrical Testing and Certification	204
9.5.1 Earth Fault Loop Impedance Testing	204
9.6. Downstream Distribution	205
9.6.1 UPS Connection	205
9.6.2 External Bypass Connection	205
9.6.3 Distribution Boards	206
9.6.4 Power Distribution Units (PDUs)	206
9.6.5 Automatic and Static Transfer Switches	206
9.7 Summary	206

10. Warranties, Maintenance and Services	207
10.1 Warranties	208
10.2 Maintenance Plans	208
10.3 Response Times	209
10.3.1 Working-Hours	209
10.3.2 Clock-Hours	209
10.4 Site Access	209
10.5 Costs Covered	209
10.6 Remote Monitoring	210
10.7 Service Level Agreements	210
10.8 Other Services	210
10.8.1 Commissioning	211
10.8.2 Preventative Maintenance (PM) Visits	211
10.8.3 Battery Testing, Replacement and Disposal	212
10.8.4 Load Bank Testing	212
10.8.5 Third-Party Provision	213
10.8.6 Full System Tests	213
10.8.7 Infrared Non-Contact Measurement	213
10.8.8 Hire and Leasing	214
10.9 Summary	214

Appendices	215
Appendix - A Glossary of Terms	216
Appendix - B World Voltages and Frequencies	228
Appendix - C Sample UPS Specifications	234
Appendix - D UPS Site Survey	248
Appendix - E UPS Sizing Check-List	252
Appendix - F Method Statement - Installation and Commissioning	254
Appendix - G UPS Commissioning Certificate	258
Appendix - H Method Statement - Preventative Maintenance and Repair	260
Appendix - I Website Information Sources	266
Appendix - J Standards	267
